

Anti-recomputation regimes: reuse stable state, buy fresh evidence

Video state over time

Stable state persists;
motion is the residual.

Regime denominators

Regime	Touched work	Denominator / status
C-VISION	vision tower	first-query E2E; share-limited
C-PERSIST	prompt + KV	same-video follow-up; first query paid
Routing	frame choice	quality frontier; dense backend control
Streaming	live state	candidate C-STREAM; pending artifact bundle

C-CEILING

Do not multiply rows; denominators differ.

general: $E2E = 1 / (\text{fixed} + \text{accelerated} / s)$
vision case: $1 / (1 - V_share * V_red)$
