

Support: speedup regimes are not pixel masks

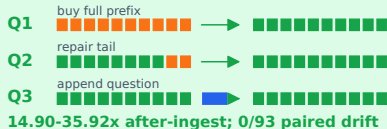

Planner masks visualize routing only; C-PERSIST, C-VISION, and C-CEILING use different denominators.

Baseline VLM

same visual state is paid again for every question

C-PERSIST

C-VISION

1.316x first-query measured sparse vision
schematic mask: no checked per-example keep mask

C-CEILING

composition audit 1.042x ≈ share ceiling

C-STREAM: state updates at native rate
candidate target, not headline result
