

Qwen routing-budget trace: how to read it

This visualizes the effective fresh-frame budget behind the Section 6 Qwen routing frontier.

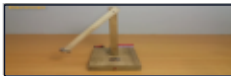

One transition: what the planner decides

TOMATO 0298-00 · 0.00-2.00s · max_abs thresholds 8/32

previous frame

current frame

planner classes

92% reused
8% fresh
age-expired: 0%

static: reused

shifted: reused

fresh: bought

Rule: reused = static + shifted while age < 4; fresh = novel + age-expired.

This is a freshness budget for the fixed-backend routing result, not object localization or KV-cache timing.
